Hibagon - BOSS

Hibagon, the Last of Yeti's

Hibagon is a fearsome yeti-like creature and a formidable beast encountered in the Land of Iron.

Origins and the Hibagon Lineage

The Hibagon were once a proud and mystical species, said to have roamed the frozen Tundra's and icy peaks of the Land of Iron long before human settlements encroached upon their territory. Known for their unmatched strength and a deep connection to the land into it's very Iron, they were revered by ancient Land of Iron Samurai tribes as protectors of balance in the unforgiving wilderness.

However, the rise of the Tetsu no Kuni disrupted the fragile Hibagon's of the region. They were hunted relentlessly—some sought their thick, enchanted fur for warmth, their ancient knowledge held within their very bones, while others believed consuming their hearts granted unparalleled treasures. Over centuries, the species dwindled until very few Hibagon remained, watching as his kin fell to extinction.

Behavior

Though Hibaon is a boss, he is far from a mindless foe. His actions stem from a deep-seated grief and an instinct to protect the last vestiges of his kind’s legacy. He attacks intruders not out of malice but as a guardian defending his sacred domain. Players who closely observe him may notice moments of hesitation, a fleeting glimpse of the sorrow beneath the rage.

Encounter

Hibagon resides in the Cavern of Yeti's deep within the Tundra, with beautiful luminescent tree's outside of his dwelling, it is more a facade for the rage built within the Yeti himself. The journey to his lair is fraught with peril, including frostbitten winds, Golem's, Polar Bear's, and Nightmare Manifestation's.

The battle with Hibagon is a test of endurance and strategy. He employs a mix of powerful physical and ranged attacks, keeping players on their toes. His combat techniques include:

DROP #6	Iron Walker Talent __(500 Damage)__
